

A1: Amazonas

Goal

The goal of this project is to develop an information system capable of supporting an online store, which would allow users to buy products from a wide range of categories.

Motivation

Nowadays, Portuguese products are in high demand as a result of the increasing tourism growth. Culture, history, weather and food are some of the reasons Portugal, and in spotlight Porto, being nominated the top European destiny. After some research, we identified lack of a specialized Internet retailer to offer premium selected Portuguese products and that's why *Amazonas* was born. We want to offer a unique online experience to satisfy the expectations of Portuguese enthusiasts all around the world. In the future, we'll feature the possibility of having a real-time chat with advisers from our store, to bring the best of Portugal in clicks to any part of the world.

Main Features

The platform will be user-friendly and simple to navigate in, allowing users to easily search for the items they want. The website will be available in two languages (Portuguese and English) and will also be responsive to different dimensions and platforms such as web and mobile.

User Profiles

Different users will have different permissions. The user with the lowest permissions, the "Visitor", will only be able to consult the products for sell. The "Client" will be able to buy items and add a review to the items he bought. The group with the highest permissions, the "Admin", will have the privilege of adding, removing and editing a product. We also intend to introduce an additional group, the "Support", that will be able to communicate with the clients and answer their questions.
